NORTHERN IRELAND DAFFODIL GROUP
AFFILIATED SHOW REPORTS 1998
Richard McCaw, Hillsborough, Northern Ireland

Northern Ireland Daffodil Group Early Show, March 23. There was a change of venue from past years to Coleman's Nursery in Templepatrick. This proved to be an inspired move from both our groups' and the nursery's point of view as over 1,000 people visited one of the best early shows ever seen.

Some of our more experienced exhibitors claimed this season was a clear three weeks earlier than the 1997 season. This, in turn, led to some very fine flowers being exhibited. Best Bloom in Show went to Brian Duncan for 'Dorchester' 4W-P. The other divisional awards went to Brian Duncan for 'Mederbury' 1Y-O, Derek Turbit for 'Regal Bliss' 2W-GWW, Michael Ward for 'Evesham' 3W-GYY, and James Smyth's 'Georgie Girl' 6W-GWP for any other division. Among the best of the rest were John Ennis's 'Lilac Charm' 6W-GPP, a large 'Unique' 4W-Y from Ballydorn, a 2Y-R seedling ('Sportsman' x 'Desert Storm') from Robert Curry, and a beautiful little species *N. triandrus* capax from Kate Reade. Notable was a 3-bloom vase of 'Rotarian' 3Y-R from Robert Curry, not often seen here now. The 7-Bloom Class had only one entry of 'Tyrone Gold' 1Y-Y from Richard McCaw but attracted much comment as a balanced, fine, large-flowered exhibit. Number 1 Class of six blooms staged individually had eight entries and was won by Richard McCaw with 'Lennymore' 2Y-R, 'Chickerell' 3Y-YYR, and 'Strines' 2Y-Y notable. Second was Derek Turbit, whose best were 'High Society' 2W-GWP and 'Midas Touch' 1Y-Y. Third was Michael Ward and his best were 'Evesham' 3W-GYY and 'Lighthouse Reef' 1Y-YYW-WWY. This competition was very close as 1.5 points separated the top three places.

Hillsborough, April 4. Our next two shows were Hillsborough and Enniskillen, both on April 4. These came at the end of a horrendous week with torrential rain and high winds. All exhibitors suffered damage.

The Championship class at Hillsborough, which is twelve varieties Open and singly-staged, was won by Brian Duncan and his best included 1699 2W-P, 'Dorchester 4W-P (Best Division 4), and 'Surrey' 2Y-R. Second was Robert Curry, perhaps the best twelve we have yet seen from Robbie. This included 'Valediction' 3W-GWW and a 'Dailmanach' seedling 2W-P. Third was Richard McCaw and his best were 'Chobe River' 1Y-Y and 'Charlbury' 2W-Y. In the open single classes, blooms
to note were 'Assertion' 2W-P from Brian Duncan and Derek Turbitt's 9601 1Y-Y Best Division 1.

Amateur twelve was won by Derek Turbitt, whose exhibit included 'Young Blood' 2W-R and 'Val d'Incles' 3W-W, Best Division 3 and Best Bloom in Show. Other blooms to note in this section were 'Dateline' 3Y-O, 'White Star' 1W-W, 'Mentor' 2W-GPP, 'Hampton Court' 2Y-YOO, Best Division 2, and 'Lilac Charm' 6W-GPP, Best Division 5-9, the last two exhibited by Richard McCaw.

Intermediate and Novice Best Blooms included 'Empress of Ireland' 1W-W and 'Unique' 4W-Y from Robert McMurry, and 'Dispatch Box' 1Y-Y from George Wilson.

**Enniskillen, April 4.** John Ennis won the 12-Bloom Class in which he included 'Crackington' 4Y-O Best Division 4, and 'Ravenhill' 3W-GYO. Best Seedling came from the open section and was Nial Watson's 13A/98, 2Y-Y.

Competition was much stiffer in the Senior classes where several exhibits shared the spoils. Richard McCaw won the 6-Bloom Class with an exhibit including 'Chickerell' 3Y-YYR and 'Broadway Village' 2Y-YRR, also Best Division 2. Runner-up was John Ennis who had a very good 'Goldfinger' 1Y-Y and 'Burntollet' 1W-W, also Best Division 1 and Best in Show. Also from this section came the Best Division 3, 'Port Noo' 3W-Y and 'Elfin Gold' 6Y-Y, both from Nial Watson. A stem of miniature 'Minnow' 8Y-Y with four blooms was noted from the Novice Section exhibited by Brian Donaldson.

**Coleraine Show, April 11.** The Championship for 9 blooms was won by Richard McCaw with good blooms of 'Evesham' 3W-GYY, 'White Star' 1W-W, and 'Gold Convention' 2Y-Y. Runner-up was Derek Turbitt whose best blooms were 'Achduart' 3Y-R, 'Cool Crystal' 3W-GWW, and his seedling 9409, 2Y-R. Third was William Dallas who included good blooms of 'Dorchester' 4W-P and 'Triple Crown' 3Y-GYR.

In the 3-bloom section the cup was awarded to Richard McCaw who won it by one point from William Dallas. Vases that were noted included 'Dorchester' 4W-P and 'Glen Alladale' 3W-WYO.

All the best blooms came from the Single bloom section and these were 'White Star' 1W-W, Best Division 1 and 'Lilac Charm' 6W-GPP, Best All Other Divisions, both from Richard McCaw; 'Ashmore' 2W-GWW, Best Division 2 and Best in Show, and 'Badbury Rings' 3Y-YYR, Best Division 3, both from John Maybin. John Maybin was heard to describe this show as his "Swan Song." Let's hope John has many more swan songs.

City of Derry Horticulture Show, April 18. The show was judged on the Friday night and opened Saturday morning in conjunction with a coffee morning. The Open section was almost a two-horse race between Seamus McCauley and Robert Patton. Seamus won the most points in both the 3-bloom and single-bloom classes. Blooms to note here were 'Sperrin Gold' 1Y-Y, 'Silver Surf' 2W-W, 'Midas Gold' 1Y-Y, 'White Star' 1W-W, 'Atholl Palace' 4W-Y, and 'Naivasha' 2W-P.

The Intermediate section was won by M. Calgwell. This section was depleted due to the less experienced exhibitors being hit badly by the early season and severe weather conditions just before the show. Best Bloom in Show was a clean, smooth bloom of 'White Star' 1W-W shown by Seamus McCauley.

Ballymena, April 18. The Ballymena show was the same day as the City of Derry show. With several exhibitors not able to attend, it left the court wide open for Robert Curry and did he have a field day! In the 12-bloom class Robbie's best flowers were 'Doctor Hugh' 3W-G00, 'Goldfinger' 1Y-Y, and 'Ridgecrest' 3W-YYO. Runner-up was Sandy McCabe whose best included Best Seedling #1302, 4Y-R. Kate Reade was third and she included the Best Division 2, 'Solihull' 2Y-O. The rest of the best blooms came from the single classes and they were Best Division 1 'Goldfinger' 1Y-Y and Best Division 4 'Sherborne' 4Y-Y, both from Robert Curry. Best Division 3 and Best in Show was a very fine example of 'Achduart' 3Y-R from Derek Turbitt. Best Bloom in the Novice Section was 'Mentor' 2W-GPP exhibited by Mrs. McLaughlin.

Belfast Spring Show, April 25-26. This is our main show of the year and was the highlight at the end of our week-long Second World Daffodil Tour, which was attended by 107 visitors. There will be lots of reports through many magazines, so suffice it for me to say that everyone had a ball, both visitors and locals, and I hope it will not be long before we can do it all again. All the judges at Belfast were visitors and it was good to see some of the ways they went about selecting their choices of best flowers. I did not hear anyone contradict them; of course a bloom of the quality of our Best Bloom made it easy.

The Belfast Show was to be our showpiece to round off the Tour, but with the early season and weather that was so unkind to daffodil growers, exhibitors had to rely on all their experience and patience to put forward their best exhibits. They did not disappoint.

The Open Championship of Ireland was won by Brian Duncan with a most beautifully-balanced exhibit, and man, do I like 'Jake' 3Y-R! Brian also included good 'Ethos' 1Y-Y and 'Garden News' 3Y-ORR. In his second-placed seedling group, Brian included 1749, 2W-P and 1662, 3Y-YRR, and both caught my eye. The American Vase was also won by
Brian Duncan, including ‘Berceuse’ 2W-P. Kate Reade’s ‘Moonflight’ 4Y-Y was the nicest flower in her second-placed vase. Sandy McCabe had Best Division 4 with ‘Serena Beach’ 4W-Y which came from his winning Gilbert Andrews Exhibit. The South East England Daffodil Medal was awarded to Brian Duncan for his winning exhibit of 3 vases of 3 blooms in our new International Classes. ‘Altun Ha’ 2Y-W was the best here. Best 3-Bloom Vase in the Open Section was ‘Ethos’ 1Y-Y, also Brian’s. In this section I also spotted ‘Ring Fence’ 3Y-YYR as good as ‘Triple Crown’, only bigger. From the Open single blooms came Best Seedling Open #1/11/78, 9W-YYR from Kate Reade.

In the Miniature Section Richard McCaw won both classes with ‘Sun Disc’ 7Y-Y, 3 blooms in one class with 3 blooms of ‘Clare’ 7Y-Y from Nial Watson was second, and a single ‘Sun Disk’ 7Y-Y from Kate Reade was second in the single Bloom Class.

Again the Senior Amateur Section was where the close competition was. In his winning Championship of Ireland, Richard McCaw included good ‘Samsara’ 3Y-YRR, ‘Triple Crown’ 3Y-GYR, and ‘Silverwood’ 3W-W. Second was Maurice Kerr who had good ‘Badbury Rings’ 3Y-YYR, Garden News’ 3Y-ORR, and ‘Gold Convention’ 1Y-Y. These two exhibits were very close and would have been very hard to judge. Richard won the American Class, including a good ‘Berceuse’ 2W-P. Second was James Smyth, who included ‘Stratosphere’ 7Y-Y, judged to be the Best American-raised flower in the show.

Three good entries of 12 x 3 Blooms were on display and Sandy McCabe won the Class. He included ‘Serena Beach’ 4W-Y and ‘Goldfinger’ 1Y-Y. It was said he could have staged three good 12 single collections from this exhibit. Runner-up was Richard McCaw, his best being ‘Samsara’ 3Y-YRR and ‘Triple Crown’ 3Y-GYR.

Competition was very close in the 3-Blooms, and the best 3-Bloom Vase in Show included ‘Notre Dame’ 2W-GYP, ‘Altun Ha’ 2Y-W, and ‘Triple Crown’ 3Y-GYR from Richard McCaw. Typical of the season, many of these vases were seen to have more than one variety to each vase. Exhibitors usually like to try to confine themselves to one variety.

Maurice Kerr won the single bloom section and the flowers to be seen in this section included ‘Goldfinger’ 1Y-Y, ‘Fragrant Rose’ 2WGPP, ‘Elizabeth Ann’ 6W-GWP, and a 4-floret ‘Mission Bells’ 5W-W, and two seedlings, 9412, 3W-W and 81/1/5, 2W-P from Derek Turbitt and Maurice Kerr respectively. Also from this Senior Section came ‘Cantabile’ 9W-GGR, winning the W. Toal Award Best 5-9 for Richard McCaw. As I said earlier when good flowers are seen, Best Blooms are easy to judge and ‘Achduart’ 3Y-R from Derk Turbitt was one of these. It won Best Division 3 and Best Bloom in Show.
In the Novice section, three exhibitors fought for the Championship of Ireland which finished in the order of James Smyth, George Wilson, and David McCaw. Best flowers respectively were ‘Silent Valley’ 1W-GWW, ‘Solar Tan’ 3Y-R, ‘Woodland Star’ 3W-R, ‘Port Noo’ 3W-Y, ‘Vernal Prince’ 2W-GYY, and ‘Merlin’ 3W-YYR. Best 3-Bloom Vase was ‘Gay Kybo’ 4W-O from James Smyth and Best Novice Blooms was from Alice Watson with ‘Notre Dame’ 2W-GYP.

Northern Ireland Daffodil Group Late Show, May 10. This show, held at Nial and Hillary Watson’s place, is usually a social event with the chance to see some late flowers. This show was very well supported this year; in fact we had more blooms than vases. As one would imagine, Division 1s were not plentiful, but ‘Ethos’ 1Y-Y managed to pick up the Division 1 title. D1846, 2Y-Y was Best Division 2, ‘Triple Crown’ 3Y-GYR Best Division 3, ‘Serena Beach’ 4W-Y Best Division 4, and D1667, 4W-P was Best Seedling, all from Brian Duncan. As in the Early Show only one exhibit of seven blooms in a vase was shown and was a selection of Division 9s from Kate Reade.

It was with great delight that the Harrisons' many friends heard that Sir Frank had been awarded the RHS Peter Barr Memorial Cup—a magnificent trophy which he and Patricia must have been thrilled to receive. The accompanying photograph shows Sir Frank and Lady Harrison with Sir Frank holding the Peter Barr Cup.

Robin and I first met the Harrisons in the early days after the war when everyone came home and Belfast came alive. Frank and Patricia encouraged Robin and me to exhibit and put up trade stands in London. For several years we had a joint trade stand and we had a chance to handle and admire the newest Ballydorn seedlings.

I understand that it was some of Guy Wilson's flowers that really inspired Sir Frank. He loved the elegant whites with green tinges such as 'Cantatrice', but above all he admired the poets such as 'Cantabile' (pre-1932 raised by Guy Wilson). This year, 1998, a flower of 'Cantabile' won the best in Division 5-9 in the Belfast Show, judged by a panel of visiting judges from all over the world.

Searching for green eyes, Frank carried on his breeding program. According to his latest catalogue, he has been breeding daffodils for over 50 years, supported by Patricia and their twin daughters and families. I counted 16 poets in his catalogue for this year!

Sir Frank is quick to throw out cultivars that in his words “do not make good plants.” He is so right—the most beautiful flower in the world is useless if it is a poor grower.

In Northern Ireland, Sir Frank is a highly respected barrister with a keen legal mind. He was knighted in 1974. Frank has been a tower of strength to the Northern Ireland Daffodil Group and also helps to solve any legal problems that may crop up.

He has always been supported by his wife, Patricia, who is a wonderful cook and hostess. We look on Frank as a very great friend—honest, kind, and humorous, and also great fun to argue with!

(Editor’s note: This is the first in a series of profiles of U.K. hybridizers, most to be written by American ADS members who conducted interviews on the UK tour this spring. We are fortunate, however, to have the series begin with a profile written by a longtime colleague and friend of the hybridizer featured. Thanks to Kate Reade of Carncairn Daffodils for this article.)

Percival Dacres Williams was born in 1865 at St. Keverne, Cornwall, England. He attended Harrow and was a graduate of Trinity College, Cambridge.

He was courageous and witty, had discriminating taste, and knew how to guide nature toward his goals. His interest in daffodils originated with a visit to the RHS Horticultural Meetings in 1895-1896. In 1897 he visited Mr. Engleheart and bought his first bulb of ‘Horace’ 9W-GOR.

Once he began to hybridize, he showed himself to have a keen mind with a retentive memory, and to possess a fine discrimination where his own hybrids were concerned, destroying all that did not meet his standards. Although his methods, according to Jefferson-Brown in his 1991 book *Narcissus*, were unusual (he kept no records), he possessed an exceptional eye for good flowers. He was probably the most critical of all daffodil breeders of his time. He wanted all daffodils he introduced to have good habit, strong stem and neck, healthy constitution, a well-shaped bulb, and refinement of bloom. Due to his careful and intelligent choice of specimens he was a constant winner of the Engleheart cup in shows.

For breeding his red cups he used Engleheart’s ‘Firebrand’ 3WWY-R, and ‘Beacon’ 3W-R which received the RHS First Class Certificate in 1897. He said he did not have ‘Will Scarlet’ 2W-O on his grounds because he thought it had a bad influence on form. Thus he built up his strain of colorful flowers which were unique and of great importance in future breeding. Some important cultivars were ‘Havelock’ 2Y-Y, ‘Carlton’ 2Y-Y, ‘Crocus’ 2Y-Y, ‘Saint Egwin’ 2Y-Y (see photo), ‘Trenoon’ 2Y-Y, ‘Seville’ 2W-O, and ‘Saint. Issey’ 2Y-Y. ‘Trevithian’ 7Y-Y was outstanding among his shallow-crowned jonquil hybrids.

Williams and his cousin, J. C. Williams, originated a series of poetaz hybrids, including ‘Halvose’ 8Y-O and ‘Cragford’ 8W-O, which were the most colorful. Other divisions in which he worked and produced cultivars were the triandrus ‘Acolyte’ 5W-W, ‘Stoke’ 5Y-Y, ‘Mrs. Gordon Pirie’ (color code unknown) and cyclamineus hybrids ‘Peeping Tom’ 6Y-Y and ‘Beryl’ 6W-YYO, which was registered in 1907 and still wins blue ribbons today. Another hybrid jonquil which he originated is
‘Lanarth’ 7Y-O (see photo). He was widely known for a splendid group of poetaz which he raised at Lanarth near St. Keverne in Cornwall.

He was also interested in scent, along with Mr. Peter Barr, who remarked at the 1934 London Daffodil Show dinner that he thought hybridizers ought to pay more attention to scent. Mr. Williams remarked that he had found difficulty in transferring Jonquil fragrance because Jonquil pollen was almost sterile. He believed some Jonquil hybrids might be crossed with larger daffodils, and in the future a race of sweetly-scented daffodils would appear.

Williams was especially interested in garden daffodils which were sold at a moderate price. His desire was for the RHS Narcissus Committee to have trials and publish an annual list of good garden plants at popular prices. Jefferson-Brown states, “The measure of his...greatness can be gathered from the number of his flowers still grown commercially Matthew Zandbergen had the stock of ‘Cragford’ 8W-O and found it to be a popular early forcer.”

Mr. Williams died suddenly in 1935 in St. Keverne. Friends subscribed to a memorial fund in his memory and a medal was cast. The medal showed both daffodils and rhododendrons (his other horticultural interest) and was to be given in alternate years for these two groups, daffodils and rhododendrons. The first medal was given to Mrs. Williams. In 1975 the funds ran out and the medal was discontinued.

Williams’ son, Michael Percival Williams, was born in 1903 and began raising daffodils in 1935. He continued long after his father’s death until his own death in 1963 at age 60. Michael’s best-known flower is ‘St. Keverne’ 2Y-Y, which is still widely grown commercially.

COMMENTS ON HENRY HARTMANN’S COMMENTS
ABOUT ‘GOLD CONVENTION’
Fred Silcock, Victoria, Australia

Any writing on daffodil hybridizing interests me, and the article on all-yellow breeding by Henry Hartmann in the September, 1996, issue of the Journal was particularly enjoyable.

Henry’s story of his pursuit of quality yellows sounds very much like my efforts in the same direction. The details about the use of ‘Gold Convention’ 2Y-Y were of special interest. Evidently Henry has had more satisfactory results from this parent than I had had from it up to that date. For me, ‘Gold Convention’ has thrown but a small number of seedlings possessing an acceptable degree of refinement. I’ve used it both ways and have found that as a pollen parent less coarseness occurs in its seedlings than when it is used as the seed parent.

But as a breeding flower ‘Gold Convention’ does have some attributes that I value. Its seedlings are vigorous, produce strong stems and large hard bulbs that possess a considerable degree of disease resistance. Its disease resistance was first brought to my attention by Dr. Douglas Barlow of the state of South Australia where long hot summers test the bulb strength of any daffodil. For those reasons alone, seedlings of this cultivar are likely to remain long in some of my hybridizing programs. As far as blooms are concerned, the best from ‘Gold Convention’ may be yet to come, in the second generation and onwards.

George Tarry tells a charming story about this flower. John Lea saw a yellow daffodil that greatly impressed him in the garden of a local publican one day. He went to the publican and inquired about the flowers. “Oh, that’s one from a bag of mixed bulbs I bought from you,” said the publican. Obviously the flower was one of John’s rejected seedlings. Negotiations immediately took place and the yellow daffodil was reacquired by John and eventually named ‘Gold Convention’.

Another yellow cultivar with characteristics and breeding similar to ‘Gold Convention’ is ‘Camelot’ 2Y-Y. ‘Camelot’ also possesses red-cup genes, donated by ‘Ceylon’ 2Y-O in this case, and makes a largely troublefree bulb. In ‘Scipio’ 2Y-Y (from ‘Camelot’) and some of its offspring David Jackson has named several cultivars of excellent quality belonging to Divisions 1 and 2. One of the latest of David’s impressive introductions bred through ‘Camelot’ is ‘Disquiet’ 1Y-Y, whose trumpet takes on a distinct orange hue when mature.

There are a number of all-yellows bred by Jackson that I would recommend to anybody pursuing a Division 1 and 2 breeding program. Apart from the cultivars mentioned, I would suggest, for refinement,
anything bred from seedling 3/74. The outstanding ‘Impeccable’ 2Y-Y came from this seedling, as did ‘Habit’ 1Y-Y featured on a Jackson catalog cover. Others are ‘Buchan’ 1Y-Y, ‘Rampage’ 1Y-Y, and ‘Sobersides’ 1Y-Y. A picture of ‘Rampage’ appears on the cover of the ADS Journal of June, 1988. My own use of 3/74 has produced a number of very fine seedlings. 3/74 is itself a beautiful flower and I suspect that David’s only reason for not naming it is that it is rather small.

Henry Hartmann mentions having made many crosses both ways. I can’t recall ever intentionally making crosses both ways but last year discovered that in 1990 I made one 2-way cross, between ‘Memento’ 1YYW-P and seedling 172U (1Y-P). The difference in character and quality between the two resultant groups of offspring was astonishing. Seedling 172U x ‘Memento’ (cross No. 1) produced a much higher percentage of selections for further trials than did ‘Memento’ x 172U (cross No. 2), but the quality among No. 2 far exceeded that found in No. 1. One seedling from cross No. 2, having now flowered twice, is by far the best 1Y-P I’ve seen anywhere: it has vigor, plenty of substance, excellent form, and very strong colors, as far as yellow-pinks go.

An observation perhaps worth the hybridist’s keeping in mind is one made by John Lea. Lea had found that repeated crosses were inclined to produce better seedlings some years than in other years. I’ve rarely made repeat crosses but one I did make was between ‘Jobi’ 1Y-Y and ‘Daydream’ 2Y-W. There seemed no difference in quality between the two lots but there was certainly a difference in character. In the second cross many more seedlings seemed Division 2 in appearance, although most proved to be Division 1 when measured. I think the Division 2 appearance was due to the barrels’ being wider in so many cases. Also the trumpet edges on the second lot were slightly more ruffled.

I’ve always believed that the more seed taken from a mating, the more fully a cross can be explored. I’m quite aware that outstanding flowers can come from crosses with few seeds. I’m equally surprised at how often outstanding flowers do not produce high-quality offspring. In 1977 I made a cross between two excellent seedlings and harvested over a thousand seeds. From those seeds a number of youngsters went on to trial, but eventually only one was named. In the mid-seventies Mrs. Lionel Richardson registered a brace of seedlings from ‘Camelot’ x ‘Daydream’, mostly 2Y-Ws (some taking on hints of pink). The number of seeds involved or who else might have made the same cross I have no idea. One might have been led to think that the best from this cross had already been obtained. Then around ten years after Mrs. Richardson’s registrations John Pearson came along and made the ‘Camelot’ x ‘Daydream’ cross and got ‘Altun Ha’, a 2Y-W surpassing all others.
FRELINGHUYSEN ARBORETUM DAFFODIL PLANTING

Liz Ellwood, Rumson, NJ

Ten years ago the New Jersey Daffodil Society found a home at the Frelinghuyisen Arboretum in Morristown, NJ. Prior to that time we went from church basement to church basement to stage our shows at great cost. But when the Arboretum took us under their wing and allowed us to store our staging materials there, we moved into the twentieth century. Needless to say, our treasury also grew.

Fortunately, the Arboretum is doubly blessed with its very talented horticultural manager, Fred Spicer, and with the Morris County Park Commission, which has always been very forward thinking in its efforts to make the Arboretum a showplace.

For our part, in the spring of 1998 we put together a plan to plant and label daffodils in an area close to the entrance of the building where our show is staged. We hope to include as many divisions with as many color combinations as possible and to showcase Wister Award winners. Cultivars chosen must be easily available and affordable, costing no more than $5.00 per bulb.

This project will be ongoing. Every fall, after bulbs are delivered, the Arboretum will make the labels and plant the bulbs. The New Jersey Daffodil Society will pay for the bulbs and will probably also contribute manpower for such things as deadheading.

We are very excited about this project. We figure we will have a wonderful one-two punch for visitors to our show. After seeing flowers on the show bench, visitors can then go outside to view them in a garden setting. We hope you all will have an opportunity to see the results starting next spring.

Cultivar List for the Frelinghuyisen Arboretum

Division 9: ‘Actaea’ 9W-YYR
Division 10: N. pseudonarcissus obvallaris 10Y-Y

RANDOM THOUGHTS ABOUT BULBS
OR: POINTS TO PONDER WHILE CLEANING BULBS

Stephen J. Vinisky, Sherwood, OR

If I had to choose a prototypical narcissus bulb, the Israeli raised tazetta ‘Ziva’ would probably be at the top of the list. What magnificent, beautiful bulbs this cultivar produces. The skins are thick, smooth and of a deep, dark brown, with golden highlights that almost seem hand polished to a satiny luster when cleaned of old skins. The bulbs are rounded, squat, dense, hard as a baseball, tight necked, with a medium sized basal plate. As perfect a bulb as any that I grow. One wishes that ‘Ziva’s’ many fine bulb characteristics could be added to just about every cultivar.

Jan de Graaff wrote in the 1946 RHS Daffodil & Tulip Yearbook (page 50) that the long, narrow necks found in almost every Division 3 bulb came from N. poeticus blood and that “Further observation makes us believe that hybrids tracing back to N. poeticus poetarum are more [disease] resistant than those tracing back to N. poeticus ornatus.” Others seem to have disagreed with this opinion.

Guy L. Wilson took ‘Will Scarlett’ to task in the 1948 RHS Daffodil & Tulip Yearbook (page 21). He wrote, “I sometimes think that the most unfortunate cross ever made in the history of daffodil breeding was when Engleheart mated the wild trumpet N. muticus (syn. N. abscissus) with N. poeticus poetarum and produced ‘Will Scarlett’, which really inherited all the bad qualities of both parents.” He explained, “the combination of the long thin necked bulb of the poetarum with the somewhat soft and flabby scaly bulb of muticus resulted in the particularly bad type of bulb in ‘Will Scarlett’, long and rather thick necked, but very soft and scaly. These faults of roughness of flower and muddy colour, bad proportions and unsatisfactory soft long-necked bulbs, ‘Will Scarlett’ unfortunately transmits to the majority of its descendants for MANY generations.” ‘Will Scarlett’ is a forebear of ‘Green Island’, ‘Seraglio’, ‘Market Merry’, ‘Dick Wellband’, ‘Gallipoli’ and many other key parents of the past that lead to a host of more recent flowers.

Wilson had good things to say about the bulbs of well grown ‘Maximus’ (syn. N. hispanicus) that have the “beautiful hard and clean-skinned dark rather oblong bulbs...with their rather slender necks, from which emerges the characteristic hard textured dark blue-green foliage....’King Alfred’ is known to have ‘Maximus’ as one of its parents, and when grown under conditions to its liking, it makes beautiful hard, clean-skinned bulbs.”
Quite a number of today's trumpet daffodils have excellent bulbs. Brian Duncan's lovely 'Arthuriann' ('Gold Bond', although a Division 2, also has exceptionally fine bulbs), Elise Havens 'Gold Velvet' and 'Prosperity', John Pearson's 'Uncle Duncan' (I have to include the Division 2 'Clouded Yellow'), and John Lea's 'Corbiere' ('Gold Convention' as well!) rate highly on my list of really excellent bulbs. One little known flower may rate higher than all of them: David Bell's 'Temple Gold' for the overall quality and enormous size of the bulb. Both Peter Ramsay and David Jackson have given us many cultivars that have superlative bulbs. (John Reed has occasionally listed the vastly under-rated cultivar 'Temple Gold'.)

I admit to making some crosses using the bulb as the sole criterion for the cross. Based on the resulting seedlings I've looked at the last several years, the bulb itself is well worth paying close attention to in both crossing and selecting. Good, sound, healthy, vigorous bulbs, not surprisingly, produce good, sound, healthy, vigorous plants and flowers.

Guy L. Wilson again said it best 50 years ago:

The majority of hybridists have been so absorbed in the effort to produce more and more perfect and beautiful show flowers that too little attention has been given to constitution and habits of growth, and rarely a thought to the type of bulb, but no matter how fine a flower may be, if it is to survive it must have a good constitution, and a bulb satisfactory for commercial growing and handling. It can be readily understood that the sound hard type of bulb of good shape, that will clean easily, will travel better and keep better for a time out of the ground than soft flabby bulbs with long or soft necks...that were comparatively easy victims to fusarium, smoulder, bulb scale mite, etc. (1948 RHS Daffodil & Tulip Yearbook, page 22).

Interesting thoughts to contemplate, as meaningful today as when they were first written. Perhaps it is just that cleaning bulbs beguiles you into a deeper appreciation of their various shapes, sizes, and attributes.
NOTES FOR THE NEWCOMER:
PLANTING TIME
Peggy Macneale, Cincinnati, OH

In July, as this is written, my mind is more on digging than planting, but yesterday I had a frustrating half hour trying to locate some bulbs that could not be found because I had never labeled their exact location. This episode was clearly related to a failure at planting time.

Even if you think you will remember where various bulbs are, in relation to each other or to a certain shrub or tree or perennial, somehow your memory plays tricks. Labels and planting charts are the best answer to avert future frustrations, because eventually you will need to know where to dig to retrieve that daffodil your neighbor likes, or to rescue one from an over-exuberant daylily. My problem yesterday stemmed from a situation that is all too common. Seven or eight years ago I dug a clump of ‘Dinkie’ from its place in the border. I replanted some bulbs, with label, back in the border, and tucked the surplus out by the back fence. Those were the smaller bulbs, and they didn't bloom for several years. Meanwhile, the border planting came to a sad end—one of those mysterious disappearances. I was delighted when those by the back fence finally sent up flowers, so that I had ‘Dinkie’ again, but I never put a label out there when they were in bloom. Now I want to find them, but I expect I will have to wait till next spring. The moral of this tale is: label ALL your clumps.

This Journal will give you clues now and then about new ideas to keep your daffodils straight as you begin to change or enlarge your plantings. I know that many members use a computer to list that information, but so far I have stuck to my system of file cards and labels.

A 3 x 5 card, color-coded according to color of cup, is made out for each of my daffodils (see illustrations on the next page). On one side I list name, classification, name of originator with date of introduction, and source of acquisition. Then in two columns I keep track of date of planting and number of bulbs planted (first column) and number of flowers produced each year (second column). On the back of the card I draw a mini-map, showing placement of label and its relationship to the number of bulbs planted (shown by Xs), as well as the relationship to adjacent bulbs or other plants. I can take my card file box out to the garden when I count the flowers in the spring—sometimes the season is so busy I don't do a very good job, but when I get it right, the information
is invaluable. I also have the card file handy whenever I dig, for then I can add the information about number of bulbs dug and number replanted. I don't believe my computer could compile all that information as neatly as my card system does, but I may be wrong. The main point of all this is to remind new daffodil enthusiasts to figure out some way, right away, to make records. It may seem like a chore, but you will never regret the effort.
What else do we need to think about at planting time? Your beds should be all ready, and I trust you have chosen areas where bulbs will succeed: well-drained, and as far away from competing roots as possible. If you want to dress up the front door area, watch out for greedy foundation plantings, for your daffodils will not thrive very many years with Taxus as companions. The key word here is "thrive"—go ahead and plant some tough, inexpensive daffodils but plan on treating them almost as annuals, to be replaced often. Wister Award winners are always a good bet: ‘Ice Follies’ and ‘Peeping Tom’ for early bloom, along with ‘Accent’ and ‘Stratosphere’ for later display. Down nearer the front sidewalk, around the mailbox or lamp post, tuck in some ‘Jet Fire’ and ‘Petrel’ bulbs that can be over-planted with annuals later on.

Since daffodils are programmed to go dormant during summer heat, you should try to avoid planting your most cherished, expensive bulbs in a bed with plants that have to be watered. The current enthusiasm for prairie plants, such as purple coneflower, liatris, or coreopsis, gives us the chance to find perennial companions for daffodils that will take drought conditions. Some annuals, too, meet this requirement: marigolds are perhaps the easiest to grow from seed. The problem with marigolds, however, is that they bloom their heads off until frost, and by then you may have to be pulling them up in full bloom to make room for your new daffodils. Another suggestion is to throw out hardy annual seeds after you finish your last bulb plantings. Larkspur, California poppies, nigella, sweet alyssum—all can be sown in the fall, to germinate next spring as daffodil leaves are dying. Once you have them established, these fine annuals will come back every year unless you disturb the soil so thoroughly that the seedlings are destroyed.

So, these are a few thoughts to make your September days—and especially your October days—more productive. Adding daffodils to your landscape can become a passion, but the idea is to make it also a joy.

IN MEMORIAM: POLLY ANDERSON  
Harold Koopowitz, Irvine, CA

Thirty years ago when I joined our local daffodil group, Polly Anderson was one of the members who both encouraged and abetted my addiction. She was one of the few members of the Southern California Daffodil Society who was an active hybridizer. Although she only registered a few cultivars like ‘Pineapple Cup’ and ‘Pineapple Frills’ (bred from the former) in the early 1960s, she continued to cross plants, collect seed and breed new forms for much of her active life.

Over the years she sought out and assembled an excellent collection of tazettas including many of the older types. She liked to work with that group and always tried to make seed with them. Polly had researched many of the plants and was a font of knowledge about them. One of the best of her flowers was an excellent large white tazetta that she had found in a clump of ‘White Pearl’. I registered it for her as ‘Polly’s Pearl’.

Polly loved plants and worked with many groups of flowers including camellias, iris, and Amaryllis belladonna as well as her beloved daffodils. Her garden was made up of rows of plants, which she mulched with newspaper. It was effective at controlling weeds even if it was somewhat unsightly, but then Polly always seemed to look at the flowers and not the landscape. Plants were put into permanent positions in the garden and they were permanent. Plants were only dug if they were to be shared with friends.

Ken Anderson, her husband, was one of Walt Disney’s original seven artists and he liked to travel. Polly seemed to share his enthusiasm and accompanied him on trips as far afield as Antarctica. She was a familiar figure at the National Daffodil shows across the country.

During the years when the Southern California Daffodil Society was active, one could always count on Polly not only to attend but also to bring in bunches of flowers to share with the group. It always seemed that she had flowers in early January while everyone else was waiting until late February for the first flowers. She always supported the local shows but never seemed to care for grooming her flowers until the last moment. I think she figured she could appreciate their beauty even if
there was a little pollen in the cup and she was there not to win but to add to the general display.

Polly died this spring. She was a Silver Medal honoree in 1975, accredited judge, Regional Vice-President for the Pacific region, and Classification and Registration Chairman for several years. I like to remember her as she appears in this 1979 photo at Descanso Gardens holding a leaf of ‘Yoprim’ 8Y-Y.

_Birthflowers of the Landscape_ by Linton Wright McKnight is a new publication offered by CLN/Commercial Landscaping Network, PO Box 1885, Milledgeville, GA 31061. Orders: (800) 270-7818; email: cpnet@hom.net. Homepage: http://www.birthflowers.com. The book features a different flower each month, and the Narcissus is the flower for January. The photos are bright and colorful and the text gives some historical background, folklore, and cultivation information about the flower. It is also possible to order separate 16-page booklets of each individual flower which a plant society could sell at a markup. $27.95 hardcover; $19.95 softcover; 16-page booklet $2.00.

The September, 1998 issue of _The Avant Gardener_ (monthly newsletter, Horticultural Data Processors, Box 489, New York, NY 10028. $20 per year) reports two items of interest.

1. The traditional methods of preventing the spread of virus are to dip tools in Physan, a 10% solution of bleach, or a saturated solution of trisodium phosphate (corrodes the tool), or flame them to red heat with a propane torch (dulls the cutting edge). The newsletter reports that there is evidence that a milk dip is effective, using either fresh or non-fat dry milk.

2. A product from Champs All Natural Products of Pompano Beach, Florida is being tested for control of soil pests and diseases including _Fusarium oxysporum_ and various types of harmful nematodes. The product is a non-toxic combination of spicy food ingredients and is
believed to be as effective as methyl bromide. It also acts as a preemergent herbicide and is expected to be effective against serious weeds such as nutsedge.

The editor understands that Astrid Postles has finally been diagnosed as allergic to gluten and that her long suffering from vision and balance problems is being alleviated.

DAFFODIL CLASSIFICATION SYSTEM

JULY, 1998

Whether of wild or cultivated origin, once a selection has been distinguished by a cultivar name it should be assigned to Divisions 1-12. Daffodils distinguished solely by botanical name should be assigned to Division 13.

Notes

The characteristics for Divisions 5 to 10 are given for guidance only; they are not all necessarily expected to be present in every cultivar assigned to those divisions.

Division 1 – Trumpet Daffodil Cultivars

One flower to a stem; corona ("trumpet") as long as, or longer than the perianth segments ("petals").

Division 2 – Large-Cupped Daffodil Cultivars

One flower to a stem; corona ("cup") more than one-third, but less than equal to the length of the perianth segments ("petals").

Division 3 – Small-Cupped Daffodil Cultivars

One flower to a stem; corona ("cup") not more than one-third the length of the perianth segments ("petals").

Division 4 – Double Daffodil Cultivars

One or more flowers to a stem, with doubling of the perianth segments or the corona or both.

Division 5 – Triandrus Daffodil Cultivars

Characteristics of N. triandrus clearly evident: usually two or more pendent flowers to a stem; perianth segments reflexed.
Division 6 – Cyclamineus Daffodil Cultivars
Characteristics of N. cyclamineus clearly evident: one flower to a stem; perianth segments significantly reflexed; flower at an acute angle to the stem, with a very short pedicel (“neck”).

Division 7 – Jonquilla and Apodanthus Daffodil Cultivars
Characteristics of Sections Jonquilla or Apodanthi clearly evident: one to five (rarely eight) flowers to a stem; perianth segments spreading or reflexed; corona cup-shaped, funnel-shaped or flared, usually wider than long; flowers usually fragrant.

Division 8 – Tazetta Daffodil Cultivars
Characteristics of Section Tazettae clearly evident: usually three to twenty flowers to a stout stem; perianth segments spreading not reflexed; flowers usually fragrant.

Division 9 – Poeticus Daffodil Cultivars
Characteristics of the N. poeticus group: usually one flower to a stem; perianth segments pure white; corona very short or disc-shaped, usually with a green and/or yellow centre and a red rim, but sometimes of a single colour; flowers usually fragrant.

Division 10 – Bulbocodium Daffodil Cultivars
Characteristics of Section Bulbocodium clearly evident: usually one flower to a stem; perianth segments insignificant compared with the dominant corona; anthers dorsifixed (i.e. attached more or less centrally to the filament); filament and style usually curved.

Division 11 – Split Corona Daffodil Cultivars
Corona split – usually for more than half its length.
a) Collar Daffodils
Split-corona daffodils with the corona segments opposite the perianth segments; the corona segments usually in two whorls of three.
b) Papillon Daffodils
Split-corona daffodils with the corona segments alternate to the perianth segments; the corona segments usually in a single whorl of six.

Division 12 – Other Daffodil Cultivars
Daffodil cultivars which do not fit the definition of any other division.

Division 13 – Daffodils Distinguished Solely by Botanical Name
SECTION TAPEINANTHUS
Autumn flowering; one to four flowers to a rounded stem; leaves very narrow, glaucous, not always present on flowering bulbs; flower ascending,
yellow, corona absent or rudimentary; anthers widely exserted from the tube, much shorter than the filaments, dorsifixed.

**SECTION SEROTINI**

Autumn flowering; usually one to two flowers to a rounded stem; leaves very narrow, glaucous, not always present on flowering bulbs; perianth segments pure white, usually twisted; corona very short, yellow, orange or green; anthers included in or slightly exserted from the tube, longer than the filaments, dorsifixed; flowers fragrant.

**SECTION AURELIA**

Autumn flowering; three to 12 flowers to a compressed stem; leaves flat not channelled, glaucous; flowers white; corona rudimentary or absent; filaments unequal in length; anthers exserted from the tube, dorsifixed; flowers fragrant.

**SECTION TAZETTAE**

Autumn to spring flowering; three (rarely two) to 20 flowers to a usually compressed stem; leaves flat or channelled, usually glaucous; flowers white, yellow or bicoloured; anthers included in or slightly exserted from the tube, much longer than the filaments, dorsifixed; flowers fragrant. The rounded stem and green leaves of N. aureus atypical, also the orange corona of N. elegans.

**SECTION NARCISSUS**

Spring flowering; usually one flower (exceptionally two to four) to a compressed stem; leaves flat not channelled, glaucous; perianth segments pure white; corona disc-shaped or very shallow, sometimes of a single colour, but usually with base green, mid-zone yellow and rim red or orange and often scarious; anthers partly exserted from the tube, much longer than the filaments, dorsifixed; flowers fragrant. Section covers N. poeticus.

**SECTION JONQUILLA**

Spring flowering; one to five (rarely eight) flowers to a rounded stem; leaves narrow or semi-cylindrical, green; flowers yellow, never white; perianth segments spreading or reflexed; corona usually cup-shaped, usually wider than long; anthers included in or partly exserted from the tube, much longer than the filaments, dorsifixed; flowers fragrant. The autumn flowering, green-flowered N. viridiflorus is atypical.

**SECTION APODANTHI**

Spring flowering; one flower or two to five to a somewhat compressed stem; leaves narrow, channelled, glaucous; flowers white or yellow, never bicoloured; perianth segments spreading or slightly reflexed; corona cup-shaped, funnell-shaped or flared, usually wider than long; anthers included in the tube or three included and three exserted, much longer than the filaments, dorsifixed.

**SECTION GANYMEDES**

Spring flowering; one flower or two to six to an elliptical or cylindrical stem; flowers pendent, white or yellow or somewhat bicoloured; leaves flat or semi-cylindrical; perianth segments reflexed; corona cup-shaped (rarely campanulate); anthers three included in the tube, three exserted (often beyond the corona), equal to or much shorter than the filaments, dorsifixed. Section covers N. triandrus.
SECTION BULBOCODIUM

Autumn to spring flowering; one flower to a rounded stem; leaves narrow, semi-cylindrical; flowers white or yellow; perianth segments insignificant compared with the dominant corona; anthers widely exserted from the tube (often beyond the corona), much shorter than the filaments (which are usually curved), dorsifixed.

SECTION PSEUDONARCISSUS

Spring flowering; usually one flower to a more or less compressed or sometimes rounded stem; leaves flat or channelled, usually glaucous; flowers white, yellow or bicoloured; perianth segments usually spreading or inflexed; corona more or less cylindrical, often flared at mouth, yellow or white (never orange or red); anthers exserted from the tube, equal to or shorter than the filaments, sub-basifixed. The green leaves, rounded stem and strongly reflexed perianth segments of N. cyclamineus and the two to four flowers to a stem of N. longispathus and N. nevadensis are atypical.

NOTE: Hybrids distinguished solely by botanical name are also assigned to this Division.

(The Yearbook will be available from the Executive Director. Price is unknown but is expected to be around last year’s price of $21 depending on shipping costs for the increased pages. Send requests to the Executive Director unless you already regularly subscribe to the yearbook through the ADS.)
RHS AWARD OF MERIT
Stephen J. Vinisky, Sherwood, OR

The August issue of the journal of the Royal Horticulture Society *The Garden* announced that 22 daffodils have been granted the Award of Garden Merit after a three-year trial at Wisley. Three criteria were used: (1) impact of the flower (color, pose, size, grace and charm); (2) durability of the flower (flower life, weather resistance); and (3) constitution of the bulbs (health and vigor).

The trial included 131 cultivars. Twenty-one cultivars had to be removed because they developed symptoms of virus. The Award of Garden Merit was given to 22 cultivars. ‘Oryx’, ‘Quail’, and ‘Bunting’ gave more than 200 flowers from 25 bulbs after three years in trial. ‘Quail’ was noted as “outstanding.”

The following cultivars were granted the Award of Garden Merit (hybridizer’s name included):

‘Barnum’ 1Y-Y; Brian S. Duncan
‘Grasmere’ 1Y-Y; J.S.B. Lea
‘Tyrone Gold’ 1Y-Y; Brian S. Duncan
‘Glenfarclas’ 1Y-O; J.S.B. Lea
‘Gin and Lime’ 1Y-W; Carneairn Daffodils Ltd.
‘Bryanston’ 2Y-Y; J. W. Blanchard
‘Special Envoy’ 2Y-Y; J.S.B. Lea
‘Bram Warnaar’ 1Y-Y; W. Blom and Sons Ltd.
‘Willy Dunlop’ 2W-Y; W. Blom and Sons Ltd.
‘Carib Gipsy’ 2Y-WWY; A.J.R. Pearson
‘Triple Crown’ 3Y-GYR; Brian S. Duncan
‘Badbury Rings’ 3Y-YYR; J.W. Blanchard
‘Crackington’ 4Y-O; J.W. Blanchard
‘Tamar Fire’ 4Y-R; Mrs. J.L. Richardson
‘Sir Winston Churchill’ 4W-O; H. A. Holmes
‘Surfside’ 6W-Y; Grant E. Mitsch
‘Reggae’ 6W-GPP; Brian S. Duncan
‘Kaydee’ 6W-P; Brian S. Duncan
‘Quail’ 7Y-Y; Grant E. Mitsch
‘Bunting’ 7Y-O; Grant E. Mitsch
‘Oryx’ 7Y-W; Grant E. Mitsch
‘Falconet’ 8Y-R; Grant E. Mitsch

THANK YOU, EL NIÑO
Debbie Vigil, Albuquerque, NM

I’ve been growing daffodils in Albuquerque for about four years now. This amounts to fifteen or so years less than a good friend and former ADS member, Kathryn Neely, has been growing them. Kathryn invited me to visit her garden the spring of 1994. I was so taken with daffodils that she extended an offer which I’m sure has worked well with many first timers. June couldn’t come fast enough as I headed back to her garden, shovel in hand. Believe me, that was the most rewarding hour and a half of digging! Here are the names of a few treasures I went home with that day: ‘Pink Perfume’, ‘Motmot’, ‘DikDik’, ‘Snow Gem’, ‘Cassata’, ‘Dream Castle’, and ‘Dickcissel’. Even before these first bulbs had bloomed, the wheels were in motion to order more in the fall.

I decided to join the ADS and after receiving such a warm welcome from Lee and Martha Kitchens, I planned on attending my first convention in 1995. Since then I’ve made many wonderful friends, and thanks to Bob Spotts and Leone Low, my yard is becoming quite the showplace. The only down side to all this is that after comparing my stem length with those stems at national shows, I resigned myself to keeping my daffodils home here in the yard!

A week before the 1998 convention, while taking my morning walk, I decided that I wasn’t just imagining how intense the colors were this year. The stem lengths seemed quite a bit longer and if I really pushed the limits of my imagination they might even hold their own against some grown in other parts of the country. So after that morning’s walk I decided to take the plunge and exhibit! The following Tuesday, with my books open to the sections on transporting flowers to a show, I headed out into the yard. Seven stems ended up making the cut. In addition to what I’d read, I tried to remember how a case of Elise Havens’ flowers I received last year had been packed. She had sent them to help me try to start a daffodil chapter here (but that’s another story!).

When I was done packing, my little family wished me luck, and my flowers and I hopped on the plane and headed for Richmond. It is difficult for a first-time exhibitor to find the nerve to cut and bring stems, let alone actually exhibit them. By arriving a day early for the show, however, I hoped to pick up some pointers for exhibiting daffodils. Seeing a familiar face gave me the courage to ask Kirby Fong for some help. He was gracious enough to take the time to interrupt his own staging to give me a first lesson in what is and what isn’t show quality. I was really innocent, because until some things were pointed out to me,
all my stems looked like blue ribbon candidates, but after learning what to look for, I asked Kirby to be ruthless and select only those he felt had a chance. He was! Down from seven stems to three. I worked on two stems of ‘Motmot’ until it became apparent that one of those was not going to cooperate. My other entry was a single stem of *N. x odorus*. Then came the worry that my efforts wouldn’t be worth it.

The next morning everyone was frantically making last minute entries. Playing it cool as if I didn’t have anything a stake, I even helped a few people prepare their flowers. I’m sure the tour that afternoon was grueling for those seasoned exhibitors, but I was busy daydreaming about possibly winning. Even an honorable mention sounded good to me. When the time came, however, it was harder to go view the show and risk being disappointed than it was to wait! Nevertheless, I took a deep breath and went in. Although *N. x odorus* decided to disintegrate only moments before the judges walked by, to my surprise my single stem of ‘Motmot’ was the proud recipient of a red ribbon. Many could argue that one ribbon, let alone a red one, was not something to dance and squeal about, but it sure seemed like heaven to me.

I realize now that this experience was due entirely to El Niño. Other years I have given my daffodils the required amount of watering with less than show winning results. To me they are all beautiful even if they are slightly shorter than average. I think that all the die-hard exhibitors can breathe a sigh of relief that Albuquerque won’t be a force to be reckoned with. But look out gang, when El Niño returns I’ll be back!

---

**THE FAMILY OF**

**DR. WILLIAM A. BENDER**

GRATEFULLY ACKNOWLEDGES
THE GENEROUS GIFTS GIVEN
IN HIS MEMORY TO
THE AMERICAN DAFFODIL SOCIETY
Join us for a sure-to-be memorable ADS Convention, to be held in the heart of downtown Pittsburgh’s Golden Triangle on April 22-24, 1999. The convention will be headquartered at the newly renovated Marriott City Center, which is within easy walking distance of key shopping, cultural, and commercial districts.

Plan on entering your flowers in the National Show, to be held on the second floor of the hotel. Entries will be accepted from Wednesday afternoon through Thursday morning. The Show area adjoins the staging area and the Marquis Ballroom, our banquet location; and it is just steps away from the elevators—and your rooms on the upper floors.

Thursday’s optional tour will have something for everyone. We will be visiting Clayton, the turn-of-the-century estate of industrialist Henry Clay Frick. Included are a meticulously restored Victorian house, carriage museum, greenhouse, museum shop, and the Frick Art Museum. Following lunch at Clayton, we will stop at Phipps Conservatory in Schenley Park. Phipps is Pittsburgh’s Victorian conservatory, boasting 2½ acres of gardens under glass. The thirteen separate rooms feature collections of orchids, desert plants, palms, and other tropicals, as well as changing seasonal displays. Outdoor areas include a beautiful Japanese garden with a bonsai collection, an innovative children’s garden, and gardens showing a variety of perennials, bulbs, shrubs, and trees. Make sure to leave time to visit the gift shop, where you will find a nice selection of garden-related items. The stops are close enough to the hotel to allow Show judges to participate in at least part of the tour if they so desire. We plan on returning to the hotel early enough to give everyone ample time to view the Show before Thursday evening’s Awards Banquet and Annual Meeting. Spud Brogden, one of New Zealand’s eminent hybridizers, has accepted our invitation to speak.

Friday’s tour will take us to three outstanding gardens in the Pittsburgh area. The two-acre property of Jeanne, Larry, and Brieana Rowles features four hundred labeled daffodil cultivars, along with perennials, shrubs, other bulbs, and unusual trees. In addition, the Rowleses have been bitten by the daylily bug and have had their garden on tour for regional and national daylily conventions. Dianne and Bob Mrak’s garden features roughly 900 daffodil cultivars, ranging from a nice collection of miniatures to intermediate and standard-sized cultivars, all clearly labeled. The daffodils have been integrated into many
attractively designed and immaculately tended beds in which also can be
found a wide variety of perennials (Dianne, too, has a special interest in
daylilies, which number over 600 in her garden), shrubs, and other bulbs.
For variety, the third tour garden, known as “Tree Tops,” has an entirely
different character. Trumpets, large cups, small cups, and poets
predominate. Don’t look for labels—you won’t find even one; but the
seven acres of daffodils naturalized under towering trees along the
driveway are sure to leave a memorable impression.

Friday evening’s banquet will be unique in that it will be served
while cruising on Pittsburgh’s three rivers. Dress casually, and board
one of the Gateway riverboats for a relaxing and fun-filled evening as we
glide past Point State park, where the Allegheny and Monongahela
Rivers converge to form the mighty Ohio. We guarantee you’ll be
entertained by our special guest. The postcard views of Pittsburgh’s
spectacular skyline at night will be unforgettable.

We’ll be traveling to Homeworth, Ohio, on Saturday to Kridler
Gardens. Barrie Kridler and Barry Nichols are two exceptional
plantsmen whose property around their commercial garden center has
been wonderfully landscaped with choice ornamentals highlighted, at
this time of year, by thousands of daffodils. Their breakfast presentation
on new plant introductions at the Richmond Convention was thoroughly
enjoyed by those who attended. Our final banquet will be back at the
hotel, where Brian Duncan, one of the daffodil world’s top hybridizers
from Northern Ireland, will give the keynote address.

Other events during the Convention include a judges’ refresher and
hybridizers’ breakfast, as well as alternative breakfasts, and a wonderful
boutique. In addition, there will be a raffle of a beautiful, hand-made
daffodil quilt, and two daffodil gift baskets—one for the bed and bath and
the other for the kitchen and garden. As an enticement to spend an extra
day in Pittsburgh, there will be an optional Sunday tour to Fallingwater,
Frank Lloyd Wright’s internationally renowned home, designed for the
Kaufmann family and nestled in the laurel woodlands of southwestern
Pennsylvania. On our ride back to Pittsburgh, we will stop to dine at
Chez Gérard, an authentic French restaurant located in historic Hopwood
House dating from 1790.

Shuttle service is available between Pittsburgh International Airport
and the Marriott. By automobile, the hotel is easily reached by several
major roadways. A pay parking garage is connected in the hotel lobby
by elevator. Look for further details in the December Journal.

(To encourage attendance, the board of directors of the ADS voted in
September to subsidize first-time attenders. The registration fee for a
first-time attender will be $100.00.)
1999 AMERICAN DAFFODIL SOCIETY CONVENTION
April 22-24, 1999

Buying Time Breeding Better Daffodils

There is a shortcut that reduces the time to breed better daffodils. Ferret out the crucial information and in one cycle of growing seedlings, you can become a leader in the pack that is creating better daffodils. The crucial information is to identify the parent plants that have already produced superior seedlings.

Plant parentage is customarily listed as follows: Seed parent (mother) x pollen parent (father). Look for plant parents that are used repeatedly as either a mother or father. This means they possess maternal or paternal dominance in passing on good traits. If you encounter a cultivar that works well in both roles, that is desirable also.

Places to search for this information are:
1. This magazine. The Daffodil Journal yearly lists the latest cultivar registrations. This is hot-off-the-press information.
2. Daffodil Hybridizers’ Round Robin. Leone Low guides a yearly collection of letters through daffodil breeders. Some of the contributors, particularly Elise Havens, reveal results from some of their latest, most promising crosses. (Editor’s note: Contact Leone Low regarding joining a hybridizer’s round robin.)
3. Catalogs. Pick out your area of interest and record the parents that are listed for the popular cultivars. Concentrate on the more recent introductions.
4. The Daffodil Data Bank. This contains all of the records of parentage for all bred and registered daffodils. You can spend days gathering data from this source. (Editor’s note: The new Data Base Printout will be available later this year; the Illustrated Daffodil Data Bank (computerized) makes this type of search routinely and quickly. See the inside back cover for ordering information.)

Analyze your data for popular parents. Once you have this information, you can become a breeder leader in one cycle of seed sprout to bloom. How can that be? Easy. The originators of a new daffodil has generally selected from a seedling lot size of maybe a dozen up to a hundred seedlings of that cross. If you grow a seedling lot size of one hundred of that same cross, you have caught up to the originator. Grow one thousand seedlings of the same cross and you should have a few select seedlings superior to the best that the originator was able to create.

Suppose your analysis reveals one very popular mother daffodil and one very popular father daffodil. Buy a row full of mother bulbs, a
couple of father bulbs, control them to bloom at the same time, cross, collect seed, plant seed, cultivate seedlings, and when a thousand seedlings bloom, you become a daffodil breeder leader. Go for it!

See! You can buy time.

Evaluating Your Seedling Daffodils

This article was written with trumpet and long-cupped daffodils in mind. There are basically two types of daffodil flowers--exhibition and garden. Exhibition blooms should possess excellent form, substance, texture, color, stem, and pose. Garden daffodil flowers are those that beckon you from a distance and smile at you when you get close to them. Neck angles of 120 degrees or greater permit garden-type flowers to look up at you. Some daffodils are both exhibition and garden type.

So! Here you are with some promising new seedling daffodils. You are familiar with how judges evaluate show blooms and believe your creations are of blue ribbon quality. If the flowers look up, they may even be attractive garden flowers. You have compared your seedlings to similar named cultivars, including the latest introductions seen in shows and the photographs in catalogs, and feel your seedlings are superior.

Here is how I proceed from this point:

1. Disease resistance. Any of my seedlings that show any signs of susceptibility to disease are destroyed.

2. Frost resistance.
   a. Foliage. Any plant that incurs significant frost damage is destroyed.
   b. Flower. Late frost is a serious problem with early blooming exhibition-type flowers. It ruins the substance and finish of the flowers. Petals become thin, veined, and puckered. The solution is to go for later-blooming exhibition flowers by using late-blooming parents. As for garden-type daffodils, frost damage of these flowers is usually not a problem.

3. Reliability. Your seedlings bore outstanding flowers this year. What about next year? Or the year thereafter? Detailed records each year on the quality of bloom are needed. If the flowers growing in the same spot cannot produce outstanding performance year after year, their value is questionable. Once you know they are reliable performers, then the question arises, how do they perform elsewhere? That means shipping seedling bulbs out to daffodil growing friends, test gardens, or commercial growers. If you care about money, a written contract agreement is essential even if for only one bulb.
It takes five to seven years from seed to recognize a select seedling. Add three more years for in-house evaluation. (Three years for outside evaluation can coincide with in-house evaluation.) It therefore takes at least 10 years from seed to know for sure that you have a world-beater daffodil. Now, you are ready to register it.

Systemic Protection Against “The Fly”

One month after the last daffodil had bloomed, I was startled to see a couple of large narcissus flies laying eggs in my daffodil patch. This was very late in the season for fly activity. Some of the daffodil foliage was already showing signs of dying. Immediately, contact pesticide Sevin, which is deadly to hairy insects, was mist-sprayed onto the daffodil patch. That eliminated the adult flies.

Next, the fly eggs needed attention. Eighteen days after the Sevin spray, systemic pesticide Cygon was mist-sprayed onto the daffodil patch. By now, much of the foliage was half dead. In one particular area that was scheduled for digging, the foliage had matted down and was three-quarters dead. I had my doubts about Cygon penetrating the dead top layer to get down to what was left of the green foliage so I concentrated on openings in the mat to force the mist in.

Careful inspection of all dug bulbs revealed that fly larvae had made it to the base of a few bulbs, took a bite, and perished. All bulbs were sound. My conclusion is that Cygon can be absorbed by daffodil foliage that is three-quarters dead and still provide protection against large narcissus fly larvae.

1998 SHOW REPORTS

This was an unusual year for daffodil shows. In all our wisdom we planned our shows for the usual times, but El Niño’s effect on our weather caused daffodils in most parts of the country to open two to three weeks earlier than usual. Division 9 cultivars showed up in greater numbers than customary, and many Division 1 cultivars were past their prime by showtime. Large collections such as Quinns and Throckmorton’s were scarce. A few locations such as Kennett Square, Baltimore, and Columbus had to cancel their shows because there simply were not enough flowers available to stage a creditable show.

Some interesting things happened at the shows. In Indianapolis, the juniors accounted for 42% of the exhibitors and nearly 25% of the total entries. Congratulations to Suzy Wert and her Indiana cohorts in encouraging these young people. In Louisville, Linda Wallpe won the Quinn with a collection from Divisions 4 through 11—not a Division 1, 2, or 3 in the bunch. Check out the cultivar list in the last section of the show reports. In Hernando the winner of the Smaller Grower Ribbon also won the Gold Ribbon for best of show and the Silver ribbon for winning the most blue ribbons. Who says you have to grow a thousand cultivars to be a serious competitor? At the National Show in Richmond Bill Pannill won a lot of the major awards with his incredibly perfect flowers, most of his own breeding. But spectators remarked on the very prominent green coloration of ‘Areley Kings’ 2W-GWW in Clay Higgins’s Tuggle Exhibit.

The following frequency lists show the cultivars that were in an ADS Award exhibit four times or more. You’ll notice some interesting omissions compared to last year’s list, presumably because they were too early this season to be exhibited.
Thanks to Michael Berginan, Kirby Fong, Suzy Wert, Linda Wallpe, and Eileen Whitney for typing the show reports in the format used in the Journal and for verifying the spelling, division numbers, and color codes for each cultivar and species. Every attempt was made to capture the show report data correctly. Divisions and color codes in use in effect at the time the daffodils were exhibited are used here. In the section for large collections, only shows that awarded ADS awards are listed.

THE DAFFODIL SOCIETY
Was established in Britain in 1898 to cater for the needs of all daffodil enthusiasts and now has members in all the countries where daffodils are grown seriously.

The Society issues two publications each year to all members and welcomes contributions from all growers on the complete range of topics.

Minimum membership subscription for overseas members is £7 per year or £20 for 3 years, provided payment is made by STERLING International Money Order or in US dollar bills.

Mrs. Jackie Peterbridge
The Meadows, Puxton, Weston-super-Mare, North Somerset BS24 6TF, England
Corrections and amendments to the *International Daffodil Register (1998)* should be sent to the International Daffodil Registrar: by post to RHS, 80 Vincent Square, London SW1P 2PE, UK; by fax to 0171 828 3022; or by email to sally.kington@btinternet.com. Alterations to cultivar names, divisions, colour codes, originators and registrants will 1) be printed in the annual Supplements to the Register, and 2) appear on the RHS website [www.rhs.org.uk](http://www.rhs.org.uk). Alterations to parentages and descriptions will also be posted on the internet, but will be printed only upon publication of a new edition of the *Register*.

The following corrections should be noted immediately:

1. p. 12, line 1 in the table (line beginning 2n=14): *for usually sterile, read Usually fertile*
2. pp. 410 and 411: the text has been reversed, therefore: *continue p. 409 on p. 411, p. 410 on p. 412, p. 411 on p. 410*
3. pp. 459 and 460: the text has been reversed, therefore: *continue p. 458 on p. 460, p. 459 on p. 461*

---
