INTRODUCTION

We were pleased to find in the September 1989 ADS Journal that over 14 Ballydorn bred cultivars received special mention in the 1989 show reports as having played their part in winning exhibits. Quinn awards had N. Capisco, N. Firestorm, and N. Witch Doctor, while N. Golden Amber, N. Rio Rouge, and N. Witch Doctor both gained Best in Show for three blooms of a standard cultivar for their growers.

We are hopefully looking forward to some of our more recent introductions adding further success for their growers when fully acclimatised in their new homes throughout the world.

We have selected ten cultivars for naming in 1989, and bulbs of some of these new things were sent out in the autumn of 1989 to regular customers for trial in different climatic zones, and these included N. Ringhaddy, and N. Hollypark which were respectively first and second in Division Three, and N. Kenbane Head which was best Division Nine at the Belfast Festival 1989 Show.

We have forecast a £ sterling/dollar rate of \$1.60 to the £1 sterling and will as usual make good any shortfall with extra bulbs, if this should prove to be out of line when cheques are received.

Payment should be in £ sterling, or by bank cheques, or \$ or £ sterling bank drafts, payable on demand in London.

Early orders are recommended as bulb lifting will be completed by 1st July next.
N.P. HARRISON Dated 1st February, 1990.

CHOICE NEW DAFFODILS

ARRANGEMENT OF LIST, AND CODING SYSTEM

The list has been arranged in alphabetical order with the Division and Classification of each cultivar shown in the margin. The classification is in accordance with the Revised System adopted by the R.H.S. Colours are abbreviated as follows:

w—white or whitish; g—green; y—yellow; p—pink; o—orange; r—red.

For the purpose of description, the daffodil flower is divided into perianth, and corona. The perianth is described by the first letter following the number of the Division to which the cultivar belongs.

The corona is treated as having three zones: An eye zone, a mid-zone and an edge or rim. The description of the corona is separated from the description of the perianth by a hyphen and the letter then following the hyphen describes the corona colour starting with the eye zone. If however the corona is of a single colour, only a single letter of the colour code is used to describe it.
