## INTRODUCTION

*Award of American Daffodil Society Gold Medal 1993  
for hybridisation of Narcissus*

On 23rd April, 1998 the sun shone to welcome the 120 or so daffodil hybridists and enthusiasts on the 2nd World Daffodil Tour to Northern Ireland after days of big winds, and our daffodil plantings were at least able to show their substance and colours after challenging weather conditions.

But alas, most of our poeticus, and late cultivars were too shy to reveal their full beauty.

We have, this year, selected five seedling cultivars for naming, but none of them has yet been shown in competition, though all were on show for the World Tour in our bulb sheds for the visit.

Regular customers have received some of these new things as gratis bulbs, sent out to defray the always rising cost of our postal charges, and we await critical reports on their performance in the New World, Japan and Europe.

We again risk a forecast of the £Sterling/US rate, this time at US\$ 1.60 = £1 stg and we, as usual, will make good any shortfall with added bulb value.

Payment must be made by cheque or Postal Money Order, payable in London in £ Sterling or US\$. Some Saving Bank cheques are not negotiable in London and cannot be cleared in the UK.

Early orders are recommended and rewarded by extra bulbs, which are also added to make good the pre-paid postage rate, added to the payment in advance.

## ARRANGEMENT OF LIST, AND CODING SYSTEM

The list has been arranged in alphabetical order with the Division and Classification of each cultivar shown in the margin. The classification is in accordance with the Revised System adopted by the R. H. S. Colours are abbreviated as follows:

w - white or whitish; g - green; y - yellow; p - pink; o - orange; r - red.

For the purpose of description, the daffodil flower is divided into perianth, and corona. The perianth is described by the first letter following the number of the Division to which the cultivar belongs.

The corona is treated as having three zones: An eye zone, a mid-zone and an edge or rim. The description of the corona is separated from the description of the perianth by hyphen and the letter then following the hyphen describes the corona colour starting with the eye zone. If however the corona is of a single colour, only a single letter of the colour code is used to describe it.
