Trumpet Daffodils

Trumpet Daffodils naturalize well and have a long blooming season with large, bold flowers with trumpets as long as, or longer than, the flower petals. All narcissi tolerate a wide range of sunlight from full sun to semi-shade. They do, however, prefer well-draining soil, hate "wet feet" and love to be fed with our Dutch Organic Bulb Food three times each year. Bulb size: DNII. 18" to 20". April. Plant 6" to 8" deep and 6" apart. HZ: 3-7.

Do You Need To Precool Your Bulbs?

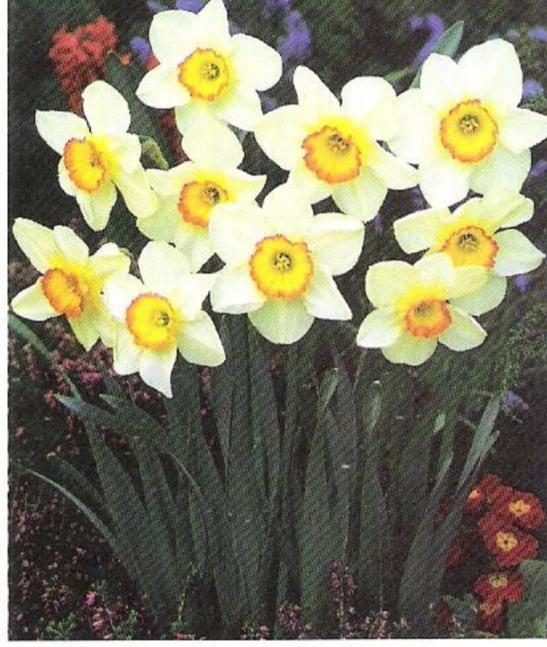

If you live in horticultural zone 8 or warmer, you may need to precool your bulbs for at least ten weeks prior to planting. (This is particularly critical for tulips!) If you are uncertain, we suggest that you contact a reliable nursery near your home for clarification. If you need to precool your bulbs, check the precooling box on the order form for special October shipment!

To determine the number of flower bulbs needed for the area in your garden, first figure out the square footage. For large bulbs, plant four bulbs per square foot. For small bulbs, plant nine bulbs per square foot. For example, a 10 foot by 20 foot garden, 200 square feet, would require 1,800 small bulbs or 800 large bulbs.	50	450	200
