

Cut Flowers For Spring

As usual I am booking orders for my famous NOVELTY BOXES which contain a collection of 12 dozen (144) blooms in 12 unusual varieties which are rarely, if ever available at florist shops. Blooms should be in their prime between March 10 and April 15. They make marvelous Easter presents. With 835 varieties from which to select, those who place orders for boxes at weekly intervals seldom get any duplications. Price, including Special Delivery, \$3.50 per box. Named collections of 1 or more blooms at 10 cents per bloom. Garden Clubs use these at their meetings to show members some of the marvelous new varieties. Delivery of blooms in good shape to any point east of Chicago is guaranteed.

Daffodils on Parade

1947

The Daffodil, also called Jonquil or Narcissus, is one of the most beautiful and permanent of all garden flowers; also a superb cut flower for the home, especially if not kept in a dry overheated room. They are among the earliest and easiest of all garden subjects. They thrive and increase indefinitely but as multiplication is so rapid, it is advisable to dig, separate and replant at least every 4 years. An area of soil that is sufficient to support one bulb cannot take care of 6 or 8 and permit them to produce satisfactory blooms.

Order bulbs in the spring while they are fresh in your mind and avoid the disappointments of orders placed late in the fall. A 5% discount will be given in bulbs (selected by me) on all orders received before June 15. Shipment of bulbs will be made early in September. Check with order please, or if desired they will be sent C.O.D. Do not put off buying bulbs from this list until next year. DAFFODILS ON PARADE FOR 1948 will in the main contain a different selection of varieties; the reason, only half of my stocks are lifted each year. All varieties guaranteed true to name.

Business reference, Bank of Gloucester, Gloucester, Va., and M. Van Waveren & Sons, 101 West 31st St., New York City.

The DAFFODIL Mart

PLANTING INSTRUCTIONS FOR DAFFODILS

The main requirement for success is a well drained soil. They are not happy in a wet spot where water will stand. Any good garden soil is ideal. Cow manure mixed in the soil at, or preferably before planting time, is ideal and will produce blooms and bulbs of unbelievable size. Bone meal is the only safe substitute to use at planting time. A top dressing of stable manure is always helpful during the winter months, serving also as a mulch. In the Middle Atlantic states plant bulbs deep enough so the neck of the bulb is covered with 3 or 4 inches of earth after the ground has settled. In the more Northern states 4 or 5 inches is desirable, while in the Southern states 2 or 3 inches is sufficient. Early planting is advisable so that the root system can develop before cold weather sets in. All questions pertaining to daffodils cheerfully answered.

The following varieties are recommended as being outstanding in their various classes and out of the Novelty type in price: Alaska, Dawson City, Lord Wellington, Robinhood, Wagners Rheingold, Beersheba, Roxane, Music Hall, Carlton, Damson, Fortune, Killebrew, Scarlet Elegance, Dick Wellband, Franciscus Drake, Hades, Queen of the Morn, Crowned Beauty, Carminowe, Carolina, Elly Ney, Govert Flinck, Latonia, Naomi, Triomphator, Geranium, Glorious, Red Guard and Insulinde.
