Mon. - Fri. 9 a.m. - 5 p.m.

## WHERE DO OUR BULBS COME FROM?

Our bulbs used to be almost all grown on our farm here in Gloucester Virginia. Over the past 20 years, we have established working relationships with over 100 of the finest quality specialty bulb growers in Holland, USA, England and Israel. We help supply them with new cultivars and help them develop and trial other bulbs for our climate and gardening situations. All of the bulbs from these growers are of excellent quality, true to name and are Nursery Propagated (by division or from seed) and free from disease (inspected by our team, Carlos, Henk, and Brent, U.S.D.A. Inspectors and Dutch Inspectors). Carlos, Henk and Brent inspect the flowers in the fields; Carlos and Henk bring the bulbs directly from the growers to our warehouse in Holland, clean, grade, count and box them, then pack them in a climate controlled container; the container is put on a ship or plane (depending on the urgency); they arrive in our warehouse here in Gloucester; we unpack the container, fill orders and ship directly to you. Even though this sounds complicated, this relationship, cuts out several 'middle men' which helps us to keep our prices competitive, and also cuts down the number of hands 'touching' the bulbs where mistakes could be made...hence fewer mistakes. This relationship also 'frees' us to hybridize new cultivars, trial new bulbs, write articles and give lectures and seminars to help others learn more about the joys of companion planting with bulbs. It's a lot of fun to see your own new cultivars bloom for the very first time, but I guess our greatest pleasure is for us to hear about **your own successes** with our bulbs. We welcome input from you, our friends and customers, as your experience will be ultimately passed on to others, in which we will all benefit. That puts us **all** on the same team...so...keep in touch!

### Hardiness Zone Map For the United States

The Limits of the  
Average Annual Minimum  
Temperatures for Each Zone

Zone 1	Below -50° F
Zone 2	-50° to -40°
Zone 3	-40° to -30°
Zone 4	-30° to -20°
Zone 5	-20° to -10°
Zone 6	-10° to 0°
Zone 7	0° to 10°
Zone 8	10° to 20°
Zone 9	20° to 30°
Zone 10	30° to 40°
Zone 11	Above 40°

**DAFFODILS:** Blooming codes — E-Early; M-Mid season; L-Late - (p) means pictures available

Available in Bedding size (DN II) in quantities of 10 and 50

Landscape Size (DN III) Large Rounds in quantities of 100

We are offering 5 X 7 color pictures of those cultivars marked with a (p) @ a cost of \$.25 ea.

**TRUMPET DAFFODILS-DIV I** (one flower to a stem, trumpet or corona as long or longer than the perianth segments)

*Most Trumpets are better 'doers' in the middle and northern states than they are in the deep south best for bedding for most focal impact.*

Bedding size (DN II) two or more stems per bulb; 3-4 per sq. ft

Landscape Size (DN III) one or more stems per bulb; 5 per sq. ft.

 make excellent subjects for windowbox gardens and patio planters.*

*See our planting instructions,  
 which will be included with your order, for particulars.*

**COLLECTIONS AND MIXTURES**

<b>Item #</b>	<b>Name of Item</b>	<b>Price</b>
97-01	Daffodil Naturalizing Mixture—About 15 of the hardiest types of daffodils; chosen because they are best for low maintenance planting; this is a mixture; they are not labeled, but many of these cultivars are also available by labeled variety	(per 100) \$ 40  (per 1000) \$ 300
97-02	Novelty Mixture—a selection of over 80 cultivars (per 100 bulbs) best suited for cutting garden; this is a mixture; they are not labeled; an inexpensive way to see a lot of different types; this is the finest, most diverse mixture obtainable anywhere!	per 50 - \$ 30 per 100 - \$50
97-03	Heath's Tried and True Collection—five each of 10 cultivars, each named and bagged separately; our favorites.	\$ 50
97-04	Beginner's Show Collection—three bulbs each of eleven cultivars; one from each division; designed to win you ribbons!	\$ 50

**THE DAFFODIL MART FERTILIZER RECOMMENDATIONS AND PLANTING INSTRUCTIONS**

Bulb crops 'in general' prefer a low nitrogen—moderate phosphorous—high potash fertilizer. We have developed a slow release 5-10-20 formula with trace elements that we feel best suits the nutritional requirements of daffodils. We recommend a top dressing (as opposed to putting fertilizer in the bed as this may tend to burn the bulbs and cause them to rot) in the fall after planting. An additional feeding may be given in late winter or in very early spring, but since this is a slow released, it takes approximately 5-6 months for it to release its nutrients so later application becomes a waste. This program gives the daffodils a continual supply of nutrients while they are growing from the time they initiate root growth until the foliage matures in June. For organic nutrients, use a little Cottonseed or Blood Meal for nitrogen—Bone Meal for phosphorous and calcium—and New Jersey Greensand or wood ashes for potash. *Bone Meal, alone, is not a complete bulb food!* Unfortunately, it attracts rodents and dogs, which may dig up your bulbs to get to the bone meal. Please order fertilizer for shipment with your bulbs. For more information on our fertilizer, see page 41.

For tulips and members of the Lily family, Holland Bulb Booster, a slo-release 9-9-6 formula that is made especially for tulips; This fertilizer was formulated from research at N.C. State University on tulips nutritional uptake at various stages of growth. See page 41.

**PREPARE YOUR FLOWER BEDS AHEAD OF TIME!**

1. If your soil is heavy, pick a spot with the best drainage or make raised beds.
2. Improve the texture of heavy clay by addition of Pine Bark, Peat Moss or Gypsum.
3. Dig your beds deep to encourage good root penetration.
4. Nothing can take the place of well composted organic matter for creating good soil texture with nutrients and water holding ability for your plants and bulbs.
