DEAR FRIENDS AND VALUED CUSTOMERS,

We are continuing to use our computer to print out our catalogue, and then having it photo-copied. We are not happy with the quality but are more than happy with the cost saving. The photos are scanned from slides, only the sharpness and exposure sometimes is adjusted, the colour definitely is not.

Every season is different, this year we again had an abnormal dry mild winter with poor stem length, size and substance, and with the first flowers a good two weeks earlier than normal. Then we had a good soaking finishing up with a normal season and I think some of the best show teams we have ever benched.

Our thanks to Mary Crowe for taking our flowers to Perth, and to Mary and Kay Pless for staging them so well. They were extremely successful, wining the twelve in the Australian championship, the twelve seedlings, the best bloom, and several division best blooms. Both teams are featured on our front cover.

Jackson's Daffodils had a fantastic Hobart show, with flowers raised by us winning many division best blooms. Helen Blowfield's magnificent NOWRA won the Grand Champion. Most of these flowers are featured on the back page.

There are lots of even better cultivars in the seedling beds to tempt you with in future years, We get a lot of pleasure and sometimes almost satisfaction working in the seedling beds

A reminder to Northern Hemisphere customers that most of our cultivars are also available at :- Mitsch Daffodils, P.O. Box 218, Hubbard, Oregon, 97032, U.S.A., Phone:- 503 651 2742, fax:- 503 651 2792, email:- havens@web-ster.com

Our best wishes to you all,

David and Robin

NEW RELEASES 2002

The flower name is first followed by a number which indicates its time of flowering here. No.1 for flowering in August; No.2 for the first week in September; No.3 is for the second week; No.4 for the third week; No.5 for the last week and No.6 for those few flowering in October. The variety's seeding number is in brackets with the last number being the year of its first flowering from seed. Then the variety's parentage followed by stem length and the flower's diameter both measured in millimetres. The colour number in the description is as close as we can match with the R.H.S. 1986 colour chart. The recent written descriptions are as close as we can get using the International Daffodil Registrar's descriptive terms.
