These prices reflect my stock and the availability of stock worldwide. As my stock increases, the prices will come down. I do not sell any bulbs that are purchased the same year from Commercial sources. My bulbs are grown for at least one year to determine as accurately as possible their identification and good health.

My purpose in making bulbs available is to distribute these lovely plants to growers who can help save the gene pool of Narcissus. These beautiful bulbs are rapidly disappearing in the wild due to grazing, road building, mass collecting for commercial purposes and general human population increase.

The species Narcissus that I sell are grown from seed whenever possible and are only sold when the stock is large enough to multiply sufficiently to maintain the population. Narcissus bulbs take 3 to 12 years to bloom from seed. A few of the bulbs are multiplied by twin-scaling.

The purchasers of these bulbs can do their part in increasing the gene pool by reading about the bulbs in their native habitats and trying to duplicate specific growing conditions when they plant them, saving seed and planting it or distributing it to others to plant. Another way to help is by sharing and showing the flowers. Your displays and generosity will educate gardeners, clubs and community groups who will, in turn, benefit from your exhibit and become interested in growing and showing themselves, thus increasing the bulb population.
