This year I have removed my descriptions of the bulbs. Please refer to *Modern Miniature Daffodils* by James S. Wells for descriptions. I am moving all of my stock to Southern Humboldt County and will describe the bulbs on my list in the future. I am supporting the current emphasis on species and their preservation and consequently have revised my list to comply with The International Daffodil Checklist of the Royal Horticultural Society. I will update it as the information is clarified.

These prices reflect my stock and the availability of stock worldwide. I do not sell any bulbs that are purchased the same year from Commercial sources. My bulbs are grown for at least one year to determine as accurately as possible their identification and good health.

My purpose in making bulbs available is to distribute these lovely plants to growers who can help save the gene pool of *Narcissus*. These beautiful bulbs are rapidly disappearing in the wild due to grazing, road building, mass collecting for commercial purposes and general human population increase.

The species *Narcissus* that I sell are grown from seed whenever possible and are only sold when the stock is large enough to multiply sufficiently to maintain the population. *Narcissus* bulbs take 3 to 12 years to bloom from seed. Seed is the ideal method of propagation except for those bulbs that have lost the ability to reproduce sexually. In this case the bulbs are multiplied by off-sets or twin-scaling.

The purchasers of these bulbs can do their part in increasing the gene pool by reading about the bulbs in their native habitats and trying to duplicate specific growing conditions when they plant them, saving seed and planting it or distributing it to others to plant. Another way to help is by sharing and showing the flowers. Your displays and generosity will educate gardeners, clubs and community groups who will, in turn, benefit from your exhibit and become interested in growing and showing themselves, thus increasing the bulb population.
