These prices reflect my stock and the availability of stock worldwide. I do not sell any bulbs that are purchased the same year from commercial sources. My bulbs are grown for at least one year to determine as accurately as possible their identification and good health.

The species *Narcissus* that I sell are grown from seed whenever possible and are only sold when the stock is large enough to multiply sufficiently to maintain the population. These beautiful bulbs are rapidly disappearing in the wild due to grazing, road building, mass collecting for commercial purposes and general human population increase. *Narcissus* bulbs take 3 to 12 years to bloom from seed. Seed is the ideal method of propagation except for those bulbs that have lost the ability to reproduce sexually. In this case the bulbs are multiplied by off-ssets or twin-scaling.

The purchasers of these bulbs can do their part in increasing the gene pool by reading about the bulbs in their native habitats and trying to duplicate specific growing conditions when they plant them, saving seed and planting it or distributing it to others to plant. Another way to help is by sharing and showing the flowers. Your displays and generosity will educate gardeners, clubs and community groups who will, in turn, benefit from your exhibit and become interested in growing and showing themselves, thus increasing the bulb population.
