# DAFFODILS & NARCISSI

**TIME OF FLOWERING**—The relative period of flowering of the different varieties out of doors we have denoted by means of numbers after the names, (1) being the earliest, (7) being the latest. The earliest varieties are normally in flower at the beginning of March and the latest varieties usually flower during the latter part of April. At the end of descriptions of certain varieties we have included 'L.L.' to indicate long lasting varieties and 'V.L.L.' to indicate very long lasting varieties, in flower.

**HEIGHT**—The heights given in inches are as recorded at our nurseries.

**QUALITY OF FLOWER**—Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we have indicated by two, three or four asterisks\* after the name of each variety. We hope this may be useful to customers when making their selections.

**TIME TO PLANT**—The best time to plant to obtain the finest flowers is early autumn, although bulbs may be put in as late as December with fairly satisfactory results. However, we recommend early planting for best results.

**DEPTH TO PLANT**—Failures with bulbs are most frequently due to their having been planted too deeply or too shallow. A good general rule to follow is to cover the bulb with soil once and a half to twice its own depth, measuring the bulb from the base to shoulder. Thus a daffodil bulb measuring two inches from base to shoulder should be covered with 3–4 inches of soil.

## DESDEMONA—N.008
