NARCISSI OR DAFFODILS

The terms Narcissus and Daffodil are interchangeable, although there exists a tendency to apply the term Narcissi to the small-flowering groups like Poeticus, Leedsii, Barrii and Incomparabilis; while the larger-flowered Trumpet varieties are most frequently referred to as Daffodils.

Soil and its Treatment. Narcissi will thrive in any ordinary garden soil, but prefer a deep, rather moist, sandy loam. When the soil is of a dry and sandy nature, it should be deeply dug, if possible at least a season before planting the bulbs, composted leaves or well-rotted cow manure being added and a vegetable or annual crop grown on the ground. Before the bulbs are planted a sprinkling of lime should be spread on the surface and then raked in. It is also beneficial to add bone meal at the rate of $1\frac{1}{2}$ oz. to the square yard while digging the soil. *Never* use fresh manure of any kind at planting time—it burns the roots! On very poor and dry sandy soils we recommend the addition of about 1 oz. per square yard of sulphate of potash to be sprinkled over the surface of the ground, after planting.

Naturalizing in Grass, etc. All Narcissi will grow equally well in the open or in partial shade. In the flower-border, to obtain the best effect, they should be planted in large groups of irregular outline, each group or clump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Narcissi should always appear in the hardy flower border, where they can be planted between the clumps of herbaceous plants, which hide as well as shelter the foliage later in the season.

All varieties of Tulips, Narcissi and Hyacinths are listed in the logical order of their respective merits, regardless of price. The variety which in our opinion is the choicest of its class, is listed at the head of its class, the second best coming second, etc.

The number after each variety name indicates the relative time of flowering.

BULBS FOR FORCING

DAFFODILS PREPARED FOR EARLY FORCING

A special process in curing and precooling shortens the growing period for forcing Daffodils so that they may be brought into flower at least three weeks in advance of the untreated bulbs. They are therefore invaluable in that they can be flowered for Christmas and throughout the holiday season. The bulbs should be potted immediately on receipt, and buried outside with a good mulch to keep out the frost. In from seven to ten weeks, depending on the variety, the flower buds will have become sufficiently advanced that they may be noticed inside the foliage. The bulbs should not be brought into the greenhouse until they have developed sufficiently that the buds have appeared through the neck of the bulb. In the greenhouse at a temperature of sixty degrees they will bloom in from four to five weeks. Varieties most satisfactory for this purpose are offered below, they are listed in the order in which they can be flowered.

HELIOS:

Incomparabilis, the earliest of all. Creamy yellow perianth, pale orange cup. Extra selected bulbs especially prepared to bloom before Christmas. \$2.75 per dozen, \$20 per 100.

THE FIRST:

Trumpet, yellow, similar to Emperor but much larger. Extra selected bulbs which may be brought into bloom a week before Christmas. \$2.75 per dozen, \$20 per 100.

KING ALFRED:

Trumpet, golden yellow. Extra selected bulbs prepared for Christmas flowering. \$2.75 per dozen, \$20 per 100.

LAURENS KOSTER:

TULIPS PREPARED FOR EARLY FORCING

By special treatment these tulips are made earlier and longer stemmed than ordinary stock, also they mature more quickly, providing cut flowers far in advance of other Tulips. The following varieties have proved most suitable for this purpose. (Orders should reach us not later than August 1).

ALBINO: Cottage, white. \$8 per 100.

ROSE COPELAND: Darwin, rosy lilac. \$8 per 100.

TELESCOPIUM: Triumph, deep pink. \$8 per 100.

WILLIAM COPELAND: Darwin, lavender. \$7 per 100.

WILLIAM PITT: Darwin, soft cherry red. \$7 per 100.

POLYANTHUS NARCISSI

Suitable for house culture only, for growing indoors in pots, as well as in pebbles and water. Should be started in a cool, dark place for a few weeks to induce good root growth. Plant in succession for a continuation of bloom.

PAPERWHITE GRANDIFLORA:

The most popular of all Narcissi for indoor growing. Produces numerous pure white flowers on a single stem. May be had in bloom eight weeks from time of planting.

Extra selected, 90 cts. per dozen, \$6 per 100.

Selected, 70 cts. per dozen, \$5 per 100.

GRAND SOLEIL D'OR:

Resembling Paperwhites in habit but yellow in color, bright orange cup. \$1.70 per dozen, \$12 per 100.

FRENCH ROMAN HYACINTHS

Delightfully fragrant and invaluable for winter flowering in the house, extensively used for Christmas forcing. May be grown in fibre as well as in pebbles and water. Each bulb produces three or four spikes, smaller than the Dutch Hyacinths but more graceful. Will bloom in about twelve weeks from planting time.

WHITE ROMANS: \$1.95 per dozen, \$15 per 100.
